Appendix B. miR-34c expression after the transfection of miR-34c oligonucleotides. A qRT-PCR analysis of miR-34c expression increased 39-fold change after the transfection of 50 nM miR-34c mimics compared with mimics NC. B, qRT-PCR analysis of miR-34c expression decreased 0.32-fold change after the transfection of 100 nmol L⁻¹ miR-34c inhibitor compared with inhibitor NC. All data are presented as means±SEM ($n=3$). ** $P<0.01$.

Appendix C. Effect of the miR-34c on the protein expression of apoptosis/proliferation marker genes. Western blotting analysis of four apoptosis/proliferation marker genes following transfection with (A) miR-34c mimics/mimics NC or (B) miR-34c inhibitor/inhibitor NC. GAPDH was used as an endogenous control.
