Appendix A Frequency distribution of the incident photosynthetic photon flux density in the greenhouse during the plant growth period.
Appendix B Effects of different Far-red light treatments on internode number. Error bars show ±SE (n=5). No significant difference was observed among treatments as indicated by the same letter.
Appendix C Effects of different Far-red light treatments on leaf photosynthetic rate under PPFD of 100 μmol m⁻² s⁻¹ (A) and 400 μmol m⁻² s⁻¹ (B). Error bars show ±SE (n=3). No significant difference was observed among treatments as indicated by the same letter (P>0.05).
