

Appendix A The expression levels of SAMDC in the overexpression lines.

Two-week-old overexpression rice leaves were collected and performed by RT-qPCR for the gene expression assay. The experiment was repeated three times with similar results. Values are mean \pm SD (n=3 biological repeats). ** indicates the significant differences from WT by student's *t*-test at $P < 0.01$.

Appendix B PAO inhibitor (guazatine) inhibits PAO activities.

PAO (Spd and Spm) activities in the presence of 1 mM of PAO inhibitor guazatine in roots (A) and leaves (B) of rice seedlings exposed to 50 and 100 mM salt stress for 5 d. Each value represents the mean (\pm S.E) of three replicates. * and ** indicate significant differences from control at $P < 0.05$ and $P < 0.01$, respectively.
