1) Detailed information is available from the China Rice Data Center (<http://www.ricedata.cn>)

2) NEV, N-efficient variety; NIV, N-inefficient variety.

3) The growth period of all the varieties is the situation of normal N condition.

4) Plant height of all the varieties is the situation of normal N condition at heading time.

Analysis of Variance

Nitrogen (N)	**	-	-	**
Varital group (V)	**	**	**	**
N×V	*	-	-	NS

1) 0 N, nitrogen omission treatment (0 Kg N ha^{-1}); NN, normal N treatment (200 Kg N ha^{-1}).

2) AE_N , Agronomic N use efficiency: [grain yield in N application plots – grain yield in N omission plots (Kg)]/N rate (Kg); PFP_N , partial factor productivity of applied N: grain yield in N application plots (Kg)/N rate (Kg); IE_N , Internal N use efficiency: grain yield (Kg)/Total N uptake of plants (Kg).

No common letter above the column indicates statistical significance at the $P = 0.05$ level. *, ** Significant at the 0.05 and 0.01 probability levels, respectively. NS, not significant at the $P = 0.05$ level.
