

Appendix C. Expression levels of the target homolog detected in the transgenic lines with *TaNF-YB11* antisense expression

WT, wild type; Anti 1 to Anti 5, transgenic lines with *TaNF-YB11* antisense expression. Data are shown by average from triplicate results plus standard error. The expression values were normalized by *Tatubulin*, a constitutive gene in *T. aestivum* species whose expression level was set as 1.
